

Asthma-Care Pharmacy Study looking for participants!

Intermountain, University of Utah Hospitals and Clinics, and Jolley's Compounding Asthma-Care Pharmacies are conducting a study to determine if personalized, pharmacist-provided asthma education will lead to improved asthma control, quality of life, and reduction in the cost of asthma care. The study time frame is 1 year (all of 2010).

Why Should I participate?

Asthma education increases your understanding of asthma, how you use your asthma medications, your quality of life all of which saves you money.

The purpose of this study is to see if asthma education meetings with a pharmacist can increase: control of your asthma, correct use of your asthma medications, how much you know about your asthma, your quality of life all of which can save you money.

What will be provided in the educational sessions?

You will be working one-on-one at the pharmacy with an Asthma-Care Pharmacist to assess your asthma control and provide education specific to your needs, including the process of asthma, proper inhaler technique, how to avoid triggers, as well as other strategies that will minimize the impact that asthma has on your day-to-day life.

Is there any cost involved?

No. Each asthma education session with the Asthma-Care Pharmacist has a value of up to \$75, for a total of \$175 for the entire study period. However, there is no cost to you to participate in the study.

Who CANNOT participate?

Patients with COPD, current smokers, and those with a history of illicit drug use.

How can I participate?

If you would like to participate in this study, please call the nearest Asthma-Care Pharmacy.
