Introduction

An average of 501 Utahns die from suicide and 3,968 Utahns attempt suicide each year. Adults 65 years of age and older comprise 9.3% of the Utah population, of all suicides and 1.7% of all suicide attempts.*

*Suicide attempts include persons who are hospitalized or treated in an emergency department for self-inflicted injuries.

One older adult dies as a result of suicide every week in Utah.

More older adults are fatally injured than hospitalized or treated in an emergency department (ED) for suicide attempts (Figure 1).

All suicide attempts should be taken seriously. Those who survive suicide attempts are often seriously injured and many have depression and other mental health problems.

Utah Trends

The 2012 Utah older adult suicide rate was 20.6 per 100,000 population ages 65+. Data from the Utah Behavioral Risk Factor Surveillance System show that males and females 85 years and older had the highest prevalence (8.0% and 12.4%) of reported thoughts of hurting themselves or that they would be better off dead.
Utah and U.S.
Utah’s older adult suicide rate has frequently been higher than the national rate (Figure 2). Utah had the 25th-highest older adult suicide rate in the U.S. for the years 2008-2010.5

Age and Sex
Older adult males had a significantly higher suicide rate compared to older adult females (39.3 and 4.9 per 100,000 population ages 65+). Older adult males also had significantly higher suicide rates compared to older adult females in every age group (Figure 3).1

Location of Injury
The majority of older adult suicides occurred at a residence (78.8%), followed by a motor vehicle (10.2%).5

The following small areas had significantly higher rates of suicide, hospitalization, and ED visits for suicide attempts than the state rate:

Highest Older Adult Suicide Rates1
- South Salt Lake*, Other Southwest District*, and Washington County (Other)

*Insufficient number of cases to meet the UDOH standard for data reliability; interpret with caution.

Highest Older Adult Hospitalization Rates for Suicide Attempts2
- No small area had a significantly higher older adult hospitalization rate for suicide attempts compared to the state rate.

Highest Older Adult ED Visit Rates for Suicide Attempts2
- No small area had a significantly higher older adult ED visit rate for suicide attempts compared to the state rate.
Method of Injury
Use of a firearm was the most common method of suicide deaths for Utah older adults, followed by poisoning and then suffocation (Figure 4).¹

Risk Factors
Risk factors for suicide among older adults may include:
• Physical health problem
• Easy access to lethal methods (such as pills or firearms)
• Stressful life event or loss

Suicide Death Circumstances⁶
Utah older adults had significantly higher rates of physical health problems when compared to at least one other age group (Figure 5).

Cost
The average total charge per year for ED visits and hospitalizations for suicide attempts was $1.1 million for Utah older adults.²
Prevention Tips

• Call for help. Help is available 24 hours a day 7 days a week. If you live in Utah, call the UNI Crisisline and Mobile Crisis Outreach Team at 801-587-3000 or call the National Suicide Prevention LifeLine at 1-800-273-TALK.

• Take any threat of suicide seriously.

• Do not leave the person alone.

• Listen to and don’t judge anyone you think may be in trouble.

• Take action. Remove guns or medications to prevent a suicide attempt.
